

# Alcolm Logistics Platform Software

## FINISHED VEHICLE LOGISTICS

## ALP On the road to logistics efficiency and speed

In today's challenging business environment, efficient logistics management is becoming essential for success. For the company Emil Frey, recognizing the need to optimize FVL was crucial for gaining a competitive edge. In partnership with Alcolm, they embarked on the journey towards digitizing logistics processes in the field of Finished Vehicle Logistics (FVL).

- Load Planning and Optimization
- Inbound & Outbound Management
- Compound Management
- Carrier Management
- Documentation
- Reporting & Analytics
- Security

## Key challenges

- Cost optimization
- Rapid growth in volumes, demanding a swift and efficient solution for FVL
- Manual processes resulted in the loss of time and resources
- Rising customer expectations (OEMs, importers, and distributors required fast, reliable and transparent service)

“

The Emil Frey Group is active in vehicle distribution and retailing in all of Europe.

In the last few years we have expanded rapidly in the Central European markets. The challenges of the growing volumes and the difficulties in the transport industry have been tremendous. Only thanks to the Alcolm Logistics Software we have been able to overcome these challenges. The software has been developed from the scratch in close collaboration of our logistic specialists and the IT specialists of Alcolm. We have started with basic functionalities. Step by step we have added more and more sophisticated functions, added suppliers and customers and automatized processes. The collaboration between the teams have been excellent, responsive and flexible – a true partnership. The result is accordingly. Compliments to the team of Alcolm, we look forward to further develop the software.

**Heinz Schneiter**

Director Central Europe  
Emil Frey Group

“

By using the Alcolm solution, we had the opportunity to digitize our logistics processes. After the full integration, we have noticed significant improvements on our daily activities - primarily on the accuracy, increase of data security, staff reduction, cost control and transparency. During the project, we had the chance to design our processes exactly by following our wish to adapt the solution in line with our internal policies with the aim of implementing a business solution tailored to our needs.
